                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 2, Application US/08965729A
Patent No. 6200751
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Jian-Ming Gu and Charles T. Esmon
TITLE OF INVENTION: EMDOTHELIUM SPECIFIC EXPRESSION
TITLE OF INVENTION: REGULATED BY EPCR CONTROL ELEMENTS
NUMBER OF SEQUENCES: 3
CORRESPONDENCE ADDRESS:
ADDRESSEE: Patea L. Pabst
STREET: 2800 One Aliantic Center, 1201 West Peachlree Street
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ..
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              DB 4; Length 2919;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.25
APPLICATION NUMBER: US/08/965,729A
FILING DATE: 07-NOV-1997
FILING DATE: 14-May-1999
CLASSIFICATION: «UNKNOWN»
PRIOR APPLICATION NUMBER: 08/434,000

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Consensus quality: 82001 bases at least Q30
Consists of Size: 83944; sum-of-contigs estimation
Quality coverage: 6.34 in Q20 bases; pulse field qel estimation
Quality coverage: 6.34 in Q20 bases; pulse field qel estimation.
* NOTE: This is a 'working draft' sequence. It currently
* consists of 7 contigs. Gaps between the contigs
* are represented as runs of N. The order of the pieces
* is believed to be correct as given, however the sizes
* of the gaps between them are based on estimates that have
* provided by the submittor.
* This sequence will be replaced
* by the finished sequence as soon as it is available and
* the accession number will be preserved.

* NOTE: This is a "working draft' sequence. It currently
* consists of 26 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will.
* be preserved.

Submitted (23-MAR-2001) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA.

On Jan 31, 2001 this sequence version replaced gi:12408434.

Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities ambiguities. If the sequence quality does not meet this standard, it will be indicated in the annotation.
                                                                                                                                                                                                                                                                                    Exon/Intron boundaries of identified genes were chosen if there were canonical splice junctions that maintained sequence continuity across the splice junctions.

Location/Qualifiers
                                                                                                                                                                                                                                   Sequence similarities were identified using Powerblast by Jinghui
                                                                                                                                                                                The repeat regions shown were identified using RepeatMasker by
                                                                                                                                                                                                                                                                                                                                                                      /organism="Mus musculus"

* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently
* consists of 10 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

Ward,T. and Wilson,R. TITLE Direct Submission JOURNAL Submitted (06-FEB-1998) Genome Science & Technology Center, University of Texas Southwester Medical Center, 5323 Harry Hines	Schageman, J., Schultz, R.A., Stimson, S., Syed, M. and Ward, T. TITLE Direct Submission JOGRNAL Submitted (20-JUM-1998) Genome Science & Technology Center, University of Texas Southwestern Medical Center, 5323 Harry Hines	COMMENT On Jun 20, 1998 this sequence version replaced gi:2842778. IMPORTANT: This submission contains the entire insert of clone pbJ606g6. pbJ606g6 comes from a PAC library constructed at the Roswell Park Cancer Institute by the Pieter de Jong group. This clone has been finished according to strict quality criteria and	attempts have been made to resolve all base calling problems such as compressions and repetitive elements. The expected Phracy Phrap calculated errors/10kb is 0.44. In addition, attempts have been made to assure over 99% of consensus base calls consist of either	CHECKER OF THIS PACT CLONE COMESTAND CHEMISTRY ON ONE CHECKER OF THE CHOMOSOMAL LOCUS: This PAC CLONE COMES From the Chromosome 11p12.2 Best's disease region mapped between STS D11S461 and EST AHNAK. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   were stree; intep://www.seq.wn.intl.edu

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              PP
   ŏ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to novel genes (AAI62752-AAI62961) and proteins (AAM42347-AAM42415) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. crebral anoxia and cepilepsy; and (f) infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            .;

ERIB 1 and ERIB 10 in ERIB 1 represents a consensus sequence less than 10 incleotides from the 5' end of eukaryotic ssrRNA genes. The ERIB 10 sequence is the inverse complement to a consensus sequence located seprox. 20 nucleotides from the 3' end of eukaryotic ssrRNA genes. Taken together, these two oligonucleotides span the vast majority of the ssrRNA gene sequence, and they were used as a primer pair in the ssrRNA gene sequence. The ssrRNA genes contained within the compared from Eimeria praecox. The ssrRNA sequence may then be used to design a species specific probes for diagnosis contained within the secont infection.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Comparative analysis of regions close to both the 3' and 5' ends
of small subunit ribosomal RNA sequences with near identity in the
eukaryotic kingdom identified two consensus sequences. ERIB 1 and
ERIB 10. Taken together, these two oligonucleotides span the vast
c ERIB 10. Taken together, these two oligonucleotides span the vast
in PCR to selectively amplify the ssrRNA sequence may then be used
consistent of the srrRNA sequence. The ssrRNA sequence may then be used
to design species specific probes for diagnosis of Eimeria praecox
infection, e.g. regions 106-113, 153-179, 188-223, 253-266,
1514 and 1664-1699 (claimed) which are complemetary to the ssrRNA
gene of E. praecox. See also AAO31640.2
CNOTE: As specifications EP-516381, EP-516391 and
gene of E. praecos of seal so and the claims section, sequences
for all these specifications can be found indexed under EP-516385.

Comparative analysis of regions close to both the 3' and 5' ends core small subunit ribosomal RNA sequences with near identity in the elekaryotic kingdom identified two consensus sequences. BRIB 1 and ERIB 10. ERIB 1 represents a consensus sequence less than 10 conclections from the 3' end of eukaryotic ssrRNA genes. The ERIB 10 conclections from the 3' end of eukaryotic ssrRNA genes. Taken together, these two oligonucleotides span the vast majority of Taken together, these two oligonucleotides span the vast majority of the ssrRNA genes sequence, and they were used as a primer pair in PCC amount of the ssrRNA genes of the ssrRNA sequence of proper in the strRNA sequence of proper in the strRNA sequence of Einerla mitis infection. See also AAQ11283-332.

Conference of the strBNA sequences of the strBNA sequence of the strBNA sequence of the strBNA sequence of Einerla mitis infection. See also AAQ11283-332.

Conference of the strBNA sequence of the specifications section, sequences of for all these specifications can be found indexed under EP-516385.

Characterial their own patent number, thus each separate patent will be indexed the sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                            Species-specific Eimeria tenella DNA probes – comprise divergent DNA sequences and are complementary to E. tenella small sub-unit ribosomal RNA gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               0;

                                                                    Comparative analysis of regions close to both the 3' and 5' ends of small subunit ribosomal RNA sequences with near identity in the cukaryotic kingdom identified two consensus sequences. FRIB 1 and ERIB 10. ERIB 1 represents a consensus sequence loss than 10 nucleotides from the 5' end of eukaryotic ssrRNA genes. The ERIB 10 sequence is the inverse complement to a consensus sequence located approx. 20 nucleotides from the 3' end of eukaryotic ssrRNA genes. Taken together, these two oligonucleotides span the vast majority of the ssrRNA gene sequence, and they were used as a primer pair in PCR to selectively amplify the ssrRNA genes contained within the genomic DNA prepd. from Eimeria mitis. The ssrRNA sequence may then be used to design a species specific probes for diagnosis of Eimeria mitis infection (method claimed). See also AAQ31465-71.

NOTE: As specifications EP-516381, EP-516383-6, EP-516391 and EP-516395-6 are identical except in the claims section, sequences of for all these specifications can be found indexed under EP-516386. Conder the claimed sequences of each specification will be indexed to constitute their own patent number, thus each separate patent will be

cukaryotic kingdom identified two consensus sequences, ERIB 1 and eukaryotic kingdom identified two oingonuclectides span the vast ERIB 10. Taken together, these two oingonuclectides span the vast in PCR to selectively amplify the ssrRNA gene contained within genomic DNA prepd. from Eimeria mitis. The ssrRNA sequence may then be used to design species specific probes for diagnosis of Eimeria mitis. Confection, e.g. regions 106-113, 153-179, 188-223, 253-266, 630-725, 933-928, 1026-1041, 1051-1057, 1149-1161, 1329-1380, 1474-1517 and 1667-170, (ctaimed) which are complemetary to the ssrRNA gene of E. mitis. See also AAQ31626-8.

NOTE: As specifications EP-516381, EP-516383-6, EP-516391 and EP-516395-6 are identical except in the claims section, sequences for all these specifications can be found indexed under EP-516385. However the claimed sequences of each specification will be indexed under their own patent number, thus each separate patent will be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Eph-related protein tyrosine kinase(s) · for monitoring and diagnosing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Probes derived from the EPH-related PTKs Cek4 (AAQ90659) and Cek5 (AAQ90660) were used to isolate novel cDNA clones (AAQ90652-58, AAQ90661-62) from chicken embryo and embryonic brain libraries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

The present sequence is one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTs were prepared from total human RNAs or polyAr FRNAs derived from 30 different Lissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-d' primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer. CDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intext 5' ends and can therefore bused to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forenist, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion vectors.
                                                                                                                    Human; 5' EST; expressed sequence tag; secreted protein; cDNA isolation;

Cek5+ protein (AAR75709) contains a 16-amino acid insertion in the juxtamembrane domain, and be a result of alternative splicing. Cek5+ is exclusively expressed in the CNS.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Op
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes a method for monitoring differential expression of genes in a first filamentous fungal (FF) cell relative to expression of the same genes in one or more second filamentous fungal cells. The method uses fluorescence-labeled nucleic acids isolated from the Fr cells and a substrate of expressed sequence tags (EST). The ESTs are used in the methods for monitoring differential expression of genes in a first filamentous fungal (FF) cell relative to expression of the same genes in one or more second filamentous fungal cells. Monitoring the global expression of genes from FF cells allows the production potential of the microorganisms to be improved. New genes may be discovered, possible functions of unknown open reading frames can be discovered, possible functions of unknown open reading frames can be monitored. The expression of genes can be used to study how FF cells adapt to changes in culture conditions, environmental stress, spore morphogenesis, recombination, metabolic or catabolic pathway englas one gene or open reading frame, and organisation of the microarrays based on function of the gene products to facilitate and malysis of the results. AAF07478 to AAF11877 represents ESTS from Aspergillus nights in the condition of the gene products to facilitate analysis of the results. BAF078 from Aspergillus oryzae; and AAF11879 to AAF11873 represents ESTS from Aspergillus oryzae; and CAAF11877 represents ESTS from Aspergillus oryzae; and CAAF11879 to AAF11877 represents ESTS from Aspergillus oryzae; and CAAF11879 to AAF11877 represents ESTS from Aspergillus oryzae; and CAAF11870 to AAF11870 from Aspergillus represents ESTS from Aspergillus oryzae; and CAAF11870 from AAF11870 from Aspergillus represents ESTS from Aspergillus and ESTS from AAF11870 from AA

cervical cancer with cytostatic activity. The nucleic acids and encoded polypeptides are useful: to assess if a patient is afflicted with cervical cancer or has a pre-malignant condition: to monitor the progression of cervical cancer or a premalignant condition in a patient; and to select and/or assess the efficacy of a compound or therapy for inhibiting cervical cancer in a patient. The nucleic acids may also be useful for gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 invention relates to novel genes (AAH68727-AAH73383) associated with

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention provides novel human secreted proteins and polynucleotides encoding them. The secreted proteins can be expressed by standard recombinant methodology. The secreted proteins and polynucleotides are used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They can also be used in diagnosing a pathological condition. The antibodies to the proteins can also be used in alleviating symptoms associated with the disorders and in diagnostic immunoassays e.g. radioimmunoassays or enzyme closed include autoimmune diseases e.g. radioimmunoassays or enzyme treated include autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. neoplasms of the breast or liver, cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. corneal infection. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sumburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The polypetides can also be used as a food additive or preservative to increase or decrease storage capabilities. The present
